

Pinout diagram of the Raspberry Pi 40-pin header. The diagram shows two rows of pins. The top row (pins 1-20) includes LEDs (LED0-LED3), debug pins (DEBUGOUT0-DEBUGOUT7), and a fan control pin (FAN_CONTROL). The bottom row (pins 21-40) includes debug pins (DEBUGOUT4-DEBUGOUT9), a fan control pin (FAN_CONTROL), and a fan control pin (FAN_CONTROL). Red boxes highlight the LED pins (1-4) and the fan control pins (21-24).

SHIELD

ES14

Cyclone IV E left and right I/O banks support true LVDS transmitters, so use them for LVDS outputs

Need + and - 2.5V for the amplifiers

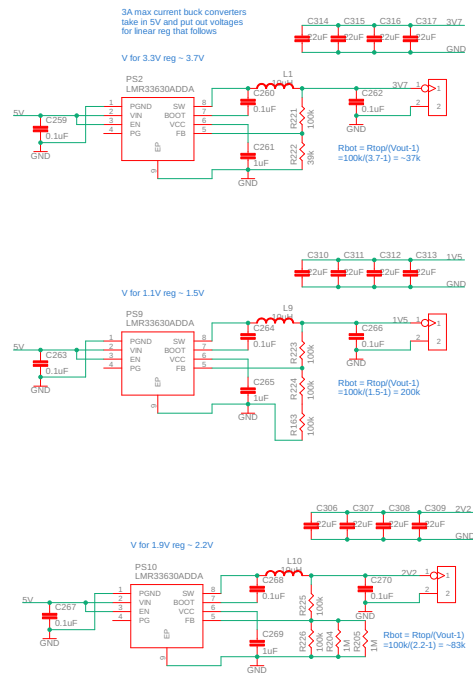

Need separate -2V5 supplies for inputs A and B because each needs more than 100mA and each of these negative regulators can only make 200mA

Need some power for the FPGA

Need 3v3 plus 1v1 and 1v9 for the main ADC

2A max current linear regs with 180mV dropout at 2A
