

LVDS receivers require an external 100 Ohm termination resistor between the two signals at the input buffer

We use 0201 resistors that fit on the bottom of the board and connect the vias under the FPGA for each LVDS input pair

Hard reset (reload firmware) and soft reset (send reset signal to firmware) buttons

Pin 1: SHIELD (GND)

Cyclone IV E left and right I/O banks support true LVDS transmitters, so use them for LVDS outputs

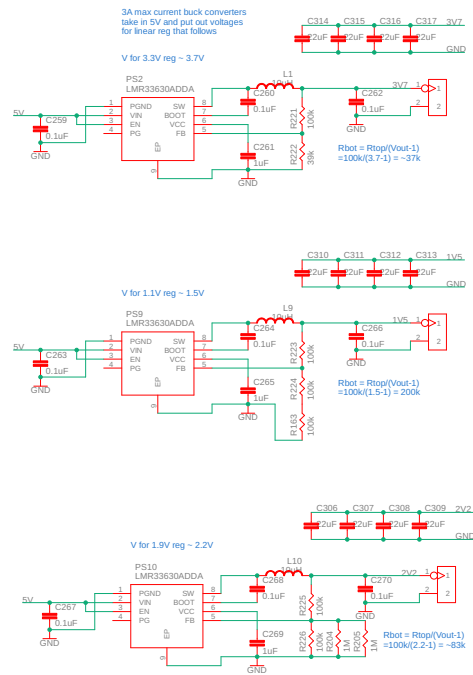

[illegible]

12/10/2024 11:58 AM f=0.47 C:\gitwork\master\HaasoscopePro\adc board\haasoscope\_pro\_adc\_fpga\_board.sch (Sheet: 11/15)

Need some power for the FPGA

Need 3v3 1v1 and 1v9 for the main ADC

2A max current linear regs with 180mV dropout at 2A
